

Next-to-Leading Order QCD Corrections to Inclusive Heavy-Flavor Production in Polarized Deep-Inelastic Scattering

Felix Hekhorn

Institute for Theoretical Physics, University of Tübingen

February 14, 2018

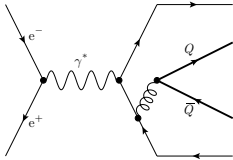

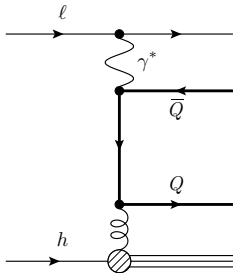

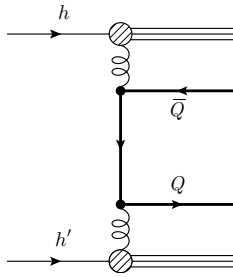

Outline

- 1 Introduction
- 2 Computation Review
- 3 Partonic Results
- 4 Hadronic Results
- 5 Outlook

Introduction - Heavy Quarks

HQ are good

Introduction - Experimental Setups

e^-e^+ -annihilation (SIA)	deep inelastic scattering (DIS)	Drell-Yan process (DY)
$e^- + e^+ \rightarrow \bar{Q} + X[Q]$	$\ell + h \rightarrow \bar{Q} + X[Q]$	$h + h' \rightarrow \bar{Q} + X[Q]$
		
LEP, ILC	HERA, COMPASS, EIC	Tevatron, LHC
gluon	factorization	top, Higgs

Introduction - Structure Functions

cross section:
$$\frac{d^2\sigma}{dx dy} = \frac{2\pi y \alpha^2}{Q^4} L^{\mu\nu} W_{\mu\nu} \quad (1)$$

hard. tensor:
$$W_{\mu\nu} = \left(-g_{\mu\nu} + \frac{q_\mu q_\nu}{q^2} \right) F_1(x, Q^2) + \frac{P_\mu P_\nu}{P \cdot q} F_2(x, Q^2) + i\epsilon_{\mu\nu\alpha\beta} \frac{q^\alpha S^\beta}{P \cdot q} g_1(x, Q^2) \quad (2)$$

$$F_L(x, Q^2) = F_2(x, Q^2) - 2x F_1(x, Q^2) \quad (3)$$

unpol. xs:
$$\frac{d^2\sigma}{dx dy} = \frac{2\pi\alpha^2}{xyQ^2} \left(Y_+ F_2(x, Q^2) - y^2 F_L(x, Q^2) \right) \quad (4)$$

pol. xs:
$$\frac{d^2\Delta\sigma}{dx dy} = \frac{4\pi\alpha^2}{xyQ^2} Y_- \cdot 2x g_1(x, Q^2) \quad (5)$$

$$Y_\pm = 1 \pm (1 - y)^2 \quad (6)$$

Computation Review

- use factorisation theorem: $s \rightarrow \xi S_h + \text{PDF}$
- $g(k_1) + \gamma^*(q) \rightarrow \bar{Q}(p_2) + Q(p_1)$
- three massive particles: $2 \cdot m^2 > 0, q^2 = -Q^2 < 0$
- compute 2-to-3-phase space: $dPS_3 \sim dt_1 ds_4 d\theta_1 d\theta_2$

- compute diagrams:
- $\Rightarrow 2xg_1(x) \sim e_L^2 \cdot \xi \Delta f_u(\xi) \otimes d_{P,q}^{(1)}(\chi, \chi')$
- $d_{P,q}^{(1)}(\chi, \chi') = c_1(\chi, \chi') \ln(\chi) + c_2(\chi, \chi') \text{Li}_2\left(\frac{1+\chi'}{1+\chi}\right) + \dots \checkmark$
- $\frac{m^2}{s} = \frac{\chi}{(1+\chi)^2}$ and $\frac{m^2}{s+Q^2} = \frac{m^2}{s'} = \frac{\chi'}{(1+\chi')^2}$ and $\frac{m^2}{Q^2} = \frac{\chi_q}{(1-\chi_q)^2}$

Computation Review - Collinear Poles

collinear poles appear as $1/\epsilon$ in

- remove by mass factorization $\rightarrow \overline{\text{MS}}_m$
- $\Rightarrow 2xg_1(x) \sim e_H^2 \cdot \xi \Delta g(\xi) \otimes \ln(\mu_F^2/m^2) \bar{c}_{P,g}^{F,(1)}(\chi, \chi_q)$
- $\bar{c}_{P,g}^{F,(1)}(\chi, \chi_q) = c_1(\chi, \chi_q) \ln(\chi) + c_2(\chi, \chi_q) \text{Li}_2\left(\frac{1-\chi_q}{1+\chi}\right) + \dots$ (\checkmark for $Q^2 \gg m^2$)

Computation Review - Virtual and Soft Poles

virtual diagrams are

FiXme Error: insert diagrams

soft poles appear in the limit of a soft gluon $k_2 \rightarrow 0$

FiXme Error: insert diagrams

soft + virtual + renormalisation is finite!

Partonic Results

cg, cq, dq

ALL g1

fully diff, NC, NC fully diff
